REVIEW

CODE REVIEW

HISTORY

Meets Specifications

Thank you so much for paying such attention to detail when fixing the minor comments made during previous review. The project looks amazing now :)

The script is neatly written and runs with great computational efficiency. What really stands out is the readability of your code - everything from comments to spacing (this is such an important trait to have as a programmer). It was a pleasure to read through it. Really awesome work!

I hope you are excited about your next step in the Nanodegree. Please keep up the good work and happy learning ahead! Also, remember that your comments and feedback are more than welcome!

START

Code Quality

All code cells can be run without error.

Appropriate data types (e.g. strings, floats) and data structures (e.g. lists, dictionaries) are chosen to carry out the required analysis tasks.

Loops and conditional statements are used to process the data correctly.

Packages are used to carry out advanced tasks.

Functions are used to reduce repetitive code.

Docstrings, comments, and variable names enable readability of the code.

Script and Questions

Raw input is solicited and handled correctly to guide the interactive question-answering experience; no errors are thrown when unexpected input is entered.

Descriptive statistics are correctly computed and used to answer the questions posed about the data. Raw data is displayed upon request by the user in this manner: Script should prompt the user if they want to see 5 lines of raw data, display that data if the answer is 'yes', and continue these prompts and displays until the user says 'no'.
