Data Analysis Professional Nanodegree program
3RD PROJECT: Conquer the freelancing marketplace

1st Proposal

Dear Adam,

It is a pleasure for me to bringing your project out to the light. I am so excited about a project of that kind.

Introducing myself in a brief, holding a BSc in Computers and Information, a Udacity Nanodegree graduate, and I am an earlier graduate of high school superior student's classes.

I already cleaned a previous work of Udacity survey data and another data set of an online UK store, I also combined between cleansing, gathering, and extracting insights in many other previous works, you can see my portfolio for more convenience.

My offer for your project is to:
- correctly structure columns and rows in tables if not
- dealing with ambiguous characters
- correcting or removing invalid data
- combining the same observational unit from different tables into one table

Cleansing up is for one sheet or table per one file up to 10000 rows or is for the main sheet in a file that has related columns of one unit exist in different files, also up to 10000 rows, for a cost of 5$ per hour.

It could take from me about from 2 to 3 work hours.

All you should do is bringing out detailed details about the content of the data and its field of work, data types of what should be contained in the columns, and rows if necessary, and it is preferable to attach a guide for that.

Have your data set in 3 workdays cleaned, as you had set a deadline, or you could pay 5$ to have the data set within 2 workdays.

For more options, you can look at my services page.

Thank you,
Mostafa A.

3RD PROJECT: Conquer the freelancing marketplace

2nd Proposal

Dear Moses,

Glad to have your interactive dashboard shining on the cloud. The kind of projects that I really integrate with.

Introducing myself in a brief, holding a BSc in Computers and Information, a Udacity Nanodegree graduate, and I am an earlier graduate of high school superior student's classes.

I already had a previous interactive dashboard on Tableau, visualizing statistics of YouTube viewed video categories in US regions, established from data sets of 310+ rows; and I had another dashboard for the Google Merchandise Store, on Google Data Studio.

With my offer you will get:
- the story aspects that you prefer on your dashboard up to 5 stages in 5 sheets (if Tableau) or up to 5 pages (in Google Data Studio)
- free additional report with free 3 insights if desired
- the preferred chart you choose i.e. Bar, Pie, Stacked, Scatter, Line Charts

This will be for a cost of 7$ per hour.

For your project, it could take from me about from 4 to 6 work hours as an hour per sheet, and another for the dashboard.

All you should do is bringing out detailed details about the content of the data and its field of work, data types of what should be contained in the columns, and rows if necessary, and it is preferable to attach a guide for that.

Have your dashboard in 5 workdays out to the light, as you had set a deadline, or you could pay 5$ to have the dashboard within 3 workdays.

For more options, you can look at my offers on my page.

Thank you,
Mostafa A.
